EXPERIENCE

OCTOBER 2025 – PRESENT

WAREHOUSE OPERATIVE, ZATU GAMES

I worked in a high-volume warehouse role with strict performance targets which I repeatedly met and exceeded expectations becoming one of the highest achieving members of staff, becoming noted for my reliability, speed and accuracy. Working across multiple sites I have become a valued team member for my work ethic and ability to continuously work on large and cumbersome tasks efficiently and effectively.

MARCH 2025-JUNE2025

KITCHEN ASSOCIATE, WETHERSPOONS

I quickly adapted this fast paced and busy work environment and became highly regarded in a short amount of time as hard working, eager to learn and for not liking to sit still whilst there were tasks remaining to be completed. I was often on crucial tasks that needed quickly completing or someone able to work under pressure with little to no mistakes less there be a resulting backlog or incorrect processing

JUNE 2022 – JUNE 2023

UNDERGRADUATE OPERATIONS ENGINEER, BAE SYSTEMS

During my time at BAE, I was involved in a variety of levels in the business and from solving manufacturing problems on the shop floor, through to working on facility strategies or managing improvement projects. Produced appropriate department documentation, liaised with planning and other technical departments, developed innovative process solutions, identified own development opportunities and understood, developed and implemented greater customer and external relations.

JANUARY 2020 – MAY 2022

FRONT & BACK OF HOUSE, KFC

Whilst working at KFC I had taken on and been trained in all roles except cook and have often been left to watch over the restaurant whilst the shift runner/ manager was on break or preoccupied with their other duties. My time here has massively developed my ability to work in a team with the busy schedule and reliance of each team member on another fulfilling their role completely.

JULY 2015 – JANUARY 2020

YOUTH VOLUNTEER, MENCAP

During my time here I was assisting at the youth club for children with learning disabilities mainly for 5–12-year-olds and occasionally for the 13–17-year-old group. At these sessions I would be assigned a child to accompany and assist during the session which would cover a wide variety of different events for the children over the sessions.

JULY 2016 – JULY 2016

OFFICE WORKER, BENTONS ESTATE AGENT

During my work experience week, I helped fill a variety of roles during my work experience week, including the management of properties, issuing updates to tenants about changes in rent and policy and filing away a great deal of letters and copies away.

EDUCATION

BACHELOR'S IN ENERGY ENGINEERING, UNIVERSITY OF EAST ANGLIA

A degree primarily focused on the production of power based upon renewable, sustainable and nuclear sources. I have taken part in many design projects and research papers upon topics and technology yet to be fully explored and to fully utilise the technology already developed. Awaiting certification of Grade estimated 2/2

A-LEVELS, STAMFORD COLLEGE

Chemistry-A, Maths-C, Physics-C

GCSES, CATMOSE COLLEGE

Maths, English Language, English Literature – Grade 7
Music, History, Biology, Chemistry, Physics Grade A
Spanish Grade C

SKILLS

IT

I have experience working with a multitude of platforms and programmes for a variety of tasks both professional and educational and am highly adaptable to learning new programs.

Platform	Experience
Microsoft C++	Proficiency in language required for university degree and advanced Excel usage
Python	Proficiency in language required for university degree
Microsoft Excel	Construction of Karnaugh maps and truth tables for my electronics modules. In depth lab reports, charts, equations, creation of companywide training catalogue, operation of a simulated nuclear reactor and data analysis.
Microsoft Word	Construction of reports, notes, importing information and formatting
Microsoft Power Point	Tracking projects including reporting purposes, creation of tailored presentations aimed at senior management, shop floor and middle management as well as selling project ideas to potential stakeholders. Accumulation of data.
Variety of CAD Software	Assembly of projects from separate pieces, used joints, rendering, production of sketches, thermal simulations and stress simulations, simulations of airflow to create HVAC system for a vertical farm and for 3D printing.
Quartus	Programming of DE10 board to produce a working traffic light system using Boolean logic to make separate circuits and components before integrating into a larger circuit to produce the traffic light system.
Eagle	Production of numerous simulations for my project which was to create a modulator, de modulator and an oscillator

Platform	Experience
MATLAB	During first year of university, we used MATLAB for data analysis of several types of energy sources and programming.
SPSS	Proficiency in program required for university degree. Analysis of large Data sets to prove or disprove hypothesis and find trends
Abaqus	Used in my dissertation to 3D model nuclear fuel pellets cracking and fractures in cladding for discussion of phase field modellings use in research and financial benefits for sector
COMSOL	Modelling Nuclear fuel pellets to model how they react over time in different reactor conditions.
Energy Plan	Modelling electric grid suitability/potential with a variety of renewable and sustainable sources of powers as well as feasibility of relying on different sources
Sunny Design Web	Used to analyse and develop integrated solar PV system for educational and community building as well as selection of equipment and cost benefits
Sun Earth Tools	Used to analyse and develop integrated solar PV system for educational and community building as well as selection of equipment and cost benefits

MECHANICAL AND PRACTICAL

I have experience in a large variety of practical work including, working in large scale production operation, surface preparation, car painting, filler work, replacing components on cars such as sensors, brake disks, oil and fluids. As well as working at heights, concrete mixing and pouring, building walls, digging and laying foundations, painting (internal and external), insulating, laying tarmac, use of power tools and petrol-powered tools (2 stroke and 4 stroke), processing trees into logs for burning, erecting and working on scaffolding, replacing roof tiles and working with lumber.

I have been working with my hands since I was a child, and it has given me a huge variety of experience and has helped me numerous times connecting with others about tasks, projects and experiences regarding projects and life.

ACTIVITIES

I am a highly passionate and active person with a wide array of skills and hobbies that have given me a broad array of experiences such as:

Grade 3 for piano, playing guitar for 10+ years with experience performing solo and as part of a production, beer, cider and mead brewing, blacksmithing, hiking, painting, archery, creating my own sausages and beef jerky, growing my own food, previously owning a variety of animals such as two rescue cows, a horse and a large amount of poultry such as geese, ducks and chickens for both meat and eggs.
